**DETAILED ACTION**

1. Receipt of Amendment (Paper No.5) filed on July 6, 2001 is acknowledged.
2. Applicants cancelled claims 1-7. New claims 8-65 are added (Paper No. 5).
3. The instant claims are subjected to restriction requirement in view of Applicants' Amendment (Paper No.5).
4. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 8-41 and 63-64, drawn to a modified biological molecule, a microarray, classified in class 530, subclass 300, class 536 and subclass 123.1, class 436 and subclass 71, and 518.
  - II. Claims 42-62, drawn to a method for immobilizing a biological molecule, classified in class 435, subclass 6.
  - III. Claim(s) 65, drawn to a kit comprising a device for imprinting an array, classified in class 436, subclass 518.
5. The inventions are distinct, each from the other because of the following reasons:

Inventions Group I and Group II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed in the invention of Group I can be used in gene therapy or in detection assays or in purification assays.

Inventions in Group II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the

Art Unit: 1656

method steps of Group II are unrelated because they have different process steps with different functions to yield different effects and results.

Group I is independent from each of Groups II - III because the combination of Group I is materially different from (a) a method of immobilizing a biological molecule of Group II; (b) a kit comprising a device of Group III. The modified biological molecule of Groups I may be obtained by synthesizing chemically.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
